- ☐ **Cooperative Education**

ABSTRACT

Learning Spanish at the beginner level is an important foundation for further language development; however, many Thai learners lack motivation due to traditional learning methods that focus on memorization and provide limited interaction. This project aims to develop a web application for learning Spanish at the A1 level for Thai beginners. The application provides interactive lessons, multimedia content, exercises, and quizzes to enhance learner engagement and understanding. Learners can track their learning progress, including completed lessons and quiz scores, to monitor their improvement. Additionally, teachers can manage learning content by adding and editing lessons, practices, and quizzes. As a result, the system supports both learners and teachers, providing an effective and interactive platform for beginner-level Spanish language learning.
