 Poster (กรณี นำเสนอผลงานปัญหาพิเศษ/การค้นคว้าอิสระ)  
 Cooperative Education (กรณี นำเสนอผลงานสหกิจศึกษา)

## ABSTRACT

THINKNET Co., Ltd has a system for tracking usage statistics on the resume detail service for companies, which is part of the JobThai platform. However, the current system was developed using outdated technology that no longer aligns with the company's core technology stack. Additionally, the user interfaces were outdated and no longer meet modern user expectations. To address these issues and improve maintainability, the company decided to develop a new system, namely resume detail service usage statistics system for company site of JobThai, using modern technologies. The new system was built using Node.js and Express.js as the development framework, with MongoDB as the database management tool. Moreover, this new system was designed to be both efficient for the current usage and easier to maintain in the future. The outcome of the new system's development has led to the ability to collect usage statistics more efficiently and completely, while fully responding to the organization's requirements.

\*Type of presentation must be matched with an option you choosing on student upload system.

\*\*The abstract can be more than one page and must be approved by project advisor before upload.
